Wireless Validation Data Pre-processing & Upload Guidelines (SOP)

> **Municipality-Specific Template:** Wireless Validation templates **must** be downloaded directly from the portal for the specific target Municipality. The portal pre-populates the template with official barangays and the critical **Location Header in Cell A1**. Never modify Cell A1 or alter the 4-row header structure.

1. Summary Checklist for Uploaders

Before uploading any Wireless Validation file, verify that:

- Template was downloaded from the portal with the target **Province** and **Municipality** selected.
- **Cell A1** contains the exact location header string: `<Municipality>, <Province>, <Region>`.
- Multi-row headers (Rows 1 to 4) are preserved intact; **survey data begins strictly on Row 5**.
- Column A (`Provider`) contains approved wireless operators (`GLOBE COMMUNICATIONS INC.`, `SMART COMMUNICATIONS INC.`, `DITO TELECOMMUNITY CORP.`).
- Column B (`Barangay`) matches official PSGC barangay names pre-filled by the portal template.
- Frequency band columns contain only valid affirmative (`TRUE`, `1`, `YES`) or negative (`FALSE`, `0`, `NO`, or blank) entries.
- No custom text descriptions (e.g., `"Good"`, `"Poor"`, `"May signal"`, `"N/A"`) are entered in band columns.
- Empty/untested bands are left completely **BLANK** or marked as `FALSE`.

2. Template Structure & Header Layout

Row / Location	Item	Details
Cell A1	**Location Header**	**Critical Identifier:** `<Municipality>, <Province>, <Region>` (e.g., `Tagoloan, Misamis Oriental, Region X`). Used by the backend engine to match the LGU database.
Row 2	**Generation**	Cellular generations: `2G`, `3G`, `4G`, `5G` spanning across band groups
Row 3	**Technology**	Transmission standards: `GSM`, `WCDMA`, `FDD-LTE`, `TDD-LTE`, `NR`
Row 4	**Columns & Bands**	Col A: `Provider`, Col B: `Barangay`, Cols C+: `B8-900`, `B3-1800`, ..., `B78-3500`
Row 5+	**Data Records**	**Survey rows begin on Row 5** (Barangays pre-multiplied across each Provider)

> **Do not edit Cell A1:** If Cell A1 is emptied, deleted, or misaligned, the backend parser cannot resolve the municipality, causing the entire file upload to be rejected immediately.

3. How to Obtain the Official Template

Because each municipality has a unique set of official barangays, templates are generated dynamically:

1. Log into the QoS Portal and navigate to the **Files** / **Upload** section.
2. Select the **Wireless Validation** tab.
3. Select your **Province** from the dropdown menu.
4. Select your **Municipality** from the dropdown menu.
5. Click **Download Wireless Validation template file**.
6. The downloaded file (e.g., `wireless_validation_template-Tagoloan.xlsx`) will have Cell A1, all barangays, and telco rows pre-populated and color-coded.

4. Valid Values for Frequency Band Columns

The validation engine processes survey results using standard boolean logic. Enter only accepted values:

Intended Status	Accepted Values	Unacceptable Values (Will Cause Errors)
Verified Coverage Present	`TRUE`, `1`, `YES`, `Y`	`"Available"`, `"Good"`, `"May Signal"`, `"Active"`, `"Checked"`
No Coverage / Inactive	`FALSE`, `0`, `NO`, `N`, or leave **BLANK**	`"None"`, `"No Signal"`, `"N/A"`, `"---"`, `"null"`

> **Warning:** Do not use arbitrary descriptive text in the band cells. Any value other than recognized boolean representations will either evaluate to `FALSE` or fail validation.

5. Barangay Name Integrity

- **Do Not Rename Pre-filled Barangays:** The system cross-references each row's barangay name against official database records.
- **Standard PSGC Mapping:** If a barangay row is modified with unknown characters or misspellings, the system will log: *"Skipping record without resolved barangay: Provider=..., Barangay='...'"*.

6. Post-Upload Support

If your file encounters processing errors:

1. Verify that **Cell A1** has not been modified or cleared.
2. Confirm that data starts on **Row 5** and header rows 1 to 4 have not been modified.
3. Review whether non-standard characters were pasted into the frequency band columns.
4. Contact the system administrator with the error log and municipality name for prompt resolution.
